Put-In-CupsTM
Chain Link Fence Art

Stewbie says "Say No To Foam, Drugs, and Bullies!"

How do you install them?

locking tabs

The cup locks into the fence only on two sides the top left and bottom right of the cup. There are four locking tabs on a cup; this allows you to install the cup any direction.

Which side of the cup should be the viewing side?

Put-in-Cups look great from both sides of the fence, and can be installed from either side of the fence. It's up to the customer which they prefer. We recommend the concaved side with the monkey logo to be the side you want facing the public. Here is our reasons why you should install them this way. * From this side you do not have to install your letters or design backwards. * The fence support poles are normally on the inside of the fence and do not *interfere* with the installation when installing from the outside in. * When installed from the front the cups completely hide the wires on the fence, and they tend to catch more light and sparkle when you drive past. Which gets even more attention.

What about installing cups where the poles are ?

Where the fence is not tied to the pole, just pull the fence away from the pole and put the cup in, and where it's tied put one tab side of the cup in under the wire and push the other side in till it locks or untie fence from the pole and retie after putting the cups in this will work too!

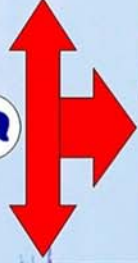

- Put-In-Cups fit 2", 2 1/4", 2 3/8" fences we also have smaller cups for 1.75" tennis court fences
A Put-in-Cup will fit into bent or misshaped fence due to lawn equipment and other objects, but I've seen some fence that require a little attention with some pliers to open up the diamond shapes. So it's a good idea to check the fence where your design is going to be before you start. You might have to move it left or to the right a few feet to miss the really damaged area. This will save you time on the installation. • Put-In-Cups become more flexible the warmer the outside temperature is, So if you are installing in the winter time, on sunny days lay out the sleeves of cups ahead of time, this will allow the cups to soak up the sun they will be more flexible for easier installation.
- I recommend using String knit gloves that have latex-coated palm and fingertips, for the larger jobs it keeps your hands nicked from the fence. For a couple of dollars, your hands will thank me...

INSTALLATION TIPS 101

- #1. If you know where you want the design to start, begin with top of outline and work your way to the right, → make sure you leave plenty a space below for lower hanging letters. ★
- #2. If you know where you want the center of the design or letters, begin here and work your way left and right with the outline. ★
- #3. If you know where you want the design to end, begin here and work your way left with the outline., ★ make sure you leave plenty a space below for lower hanging letters. ★
- #4. When you finish the outline completely, do the next color; in this case the white, then yellow, and finally fill in last color red.
- #5. **CONGRATULATIONS YOU ARE DONE!**
- #6 **Most Important... Send us your photos to info@putincups.com so we can post them on Facebook, and we'll send you an Official Cuppers License to give to all that helped & Keep Spreading the Cup Word!!! 1-800-506-7891**
